

Young Mathematicians The Thrill of Mathematical Discovery

@FedericoChialvo
artofmathstudio.wordpress.com

Director of Math
Synapse School (K-8)
Menlo Park, CA

What is Math?

Doing mathematics should always
mean finding patterns and
crafting beautiful and
meaningful explanations."
-Paul Lockhart

Setting Students up for Mathematical Discoveries

- Easy to get started
- Open middle, and/or open ended
- Multiple levels of success/understanding
- Provides a mathematical sandbox that is rich, beautiful, elegant, etc.
- Inspires students to use mathematical practices to help understand and explain why
- Motivates students to speak with each other and collaborate mathematically

Mathematical Sandbox

- Perplexing context
- Data collection, organization, modeling, and patterns throughout
- Motivate students to be systematic in their research
- Encourage students to work collaboratively

The Squareable Puzzle

Call a number “squareable” if it’s possible to build a square out of precisely that many squares. For example, 11 is squareable: 11 squares can be fit together to perfectly form another square.

(1st/2nd)

11 is squareable: 11 squares can be fit together to perfectly form another square. Daniel Finkel

The question is: can you find all the numbers less than 30 that are squareable? Is there a pattern? Can you predict squareability in general?

Dan Finkel's Puzzle in NY Times Number Play via Gary Antonik

"Banana Split Operation"
 $4+3-1$

"Gigantor Operation"
 $20 + 3$

Hundreds Game (K-2)

- Two players start from 0 and alternatively add a number from 1 to 10 to the sum
- The player who reaches 100 wins
- Part of a family of games called "NIM"

Hundreds Chart

NAME _____

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70

91	92	93	94	95	96	97	98	99	100

Subtraction Reversal Mysteries (1st-8th)

- Each player rolls a 10-sided die two times
- Find the difference between the largest number you can make using both numbers and the smallest number you can make. For example: (3,5): $53 - 35 = 18$
- Whoever has the largest difference wins
- Play several rounds, Recording your results on paper

Megan's Subtraction Mystery Poster

0	9	18	27	36	45	54	63	72	81
(0,0)	(0,1)	(0,2)	(0,3)	(0,4)	(0,5)	(0,6)	(0,7)	(0,8)	(9,0)
(1,1)	(1,2)	(1,3)	(1,4)	(1,5)	(1,6)	(1,7)	(1,8)	(1,9)	
(2,2)	(2,3)	(2,4)	(2,5)	(2,6)	(2,7)	(2,8)	(2,9)		
(3,3)	(3,4)	(3,5)	(3,6)	(3,7)	(3,8)	(3,9)			
(4,4)	(4,5)	(4,6)	(4,7)	(4,8)	(4,9)				
(5,5)	(5,6)	(5,7)	(5,8)	(5,9)					
(6,6)	(6,7)	(6,8)	(6,9)						
(7,7)	(7,8)	(7,9)							
(8,8)	(8,9)								
(9,9)									

You get two numbers. Make the biggest two-digit number and subtract the smallest number you can make out of those two numbers.

I observed: All of these answers are multiples of nine.

The pattern is: As the answers grew bigger, the gaps in the pairs grew bigger too. That's because the gaps grew according to how many nines there were in the answer.

Examples:

$$\begin{array}{r} 97 \\ -79 \\ \hline 18 \end{array}$$

$$\begin{array}{r} 82 \\ -28 \\ \hline 54 \end{array}$$

$$\begin{array}{r} 87 \\ -78 \\ \hline 09 \end{array}$$

$$\begin{array}{r} 51 \\ -15 \\ \hline 36 \end{array}$$

Subtraction Reversal Mysteries

By: Devi and Sam

If you roll a and b,
Then the difference
you multiply by 9
and you get your
answer.

7,7	7,8	7,9							
8,8	8,9								
9,9									

$$(a - b) \times 9$$

a = big number

b = small number

go math

Number Bracelets (3rd-6th)

- First player rolls twice, writing the two numbers down on a piece of inch grid paper.
- The second player does the same.
- Then students add their two numbers together, but discard the tens-place, only writing the ones-place in the next number.
- Players continue this process until they get back to the two numbers they started with (in the same order).

8	8	6	4	0	4	4	8	2	0
2	2	4	6	0	6	6	2	8	0
8	8	✓							
0	4	4	8	2	0	2	2	4	6
0	6	6	2	8	0	8	8	6	4
0	4	✓							

Sizes of a Number Bracelet

Small

9	7	6	3	9	2	1	3	4	7	1
1	8	9	7	Other Small Combinations:						

$$(0,5)=3 \quad (4,7)=12 \quad (9,2)=12$$

Small combinations range from 3 to 12, but you don't count the last two numbers.

Medium

8	6	4	0	4	4	8	2	0	2
2	4	6	0	6	6	2	8	0	8
8	6	Other Medium Combinations:							

$$(3,7)=18 \quad (4,4)=20 \quad (4,2)=20$$

Large

5	6	1	7	8	5	3	8	1	9
0	9	9	8	7	5	2	7	9	6
5	1	6	7	3	0	3	3	6	9
5	4	9	3	2	5	7	2	9	1
0	1	1	2	3	5	8	3	1	4
5	9	4	3	7	0	7	7	4	1

Other Large Combinations:

$$(4,5)=60 \quad (3,5)=60$$

What is the
longest number
bracelet? How
Can you be
Sure?

(Prove it)

910112358314594370774156178598
190998752796516730336954939272
91

This number bracelet is 62
#'s long and as big as it
Can get because all the
bracelet starters in this
bracelet makes a 60 #
bracelet.

Does it matter
which order the number
is in?

Example:

But it
doesn't
happen
on 5,0 0,5

1 2

2 1

which is
longer?

a: yes it does
matter

Does it happen
to other numbers?

a: yes it does
happen

(see example 2,1 1,2 9,4 4,9)

Q1: Does it matter which
order the number is in?

Example:

(1,2) or (2,1) which is
longer?

A: Yes it does matter

Q2: Does it happen to other
numbers?

A2: Yes it does
(see example 2,1 1,2 9,4 4,9)

*But it doesn't happen on
5,0 0,5

How many starting
Pairs are there?

Collatz Conjecture(6-8)

$$x_{n+1} = \begin{cases} x_n/2 & x_n \text{ even} \\ 3x_n + 1 & x_n \text{ odd} \end{cases}$$

- Roll a 10 sided die for a starting number, or choose a number between 1-10
- Apply the recursive formula to your starting number, recording each step
- The person who gets to 1 in the most number of steps wins

Can we reverse the process to grow the tree?

Doubling and Branching Rules

equation to grow the tree:
 $(n) \times 2$ *also used to grow branches as well as trunk!

equation to add branches:
 $(n) - 1 \div 3$ *if it's not an integer, it doesn't become a new branch!
*the answer has to be added to be a branch

Collatz Tree

How do we fit this in?

- Squareable numbers: Area, Addition/subtraction
- Hundreds Game: Counting, Addition, Place Value/Hundreds Chart
- Subtraction Reversal Mysteries: Subtraction, Multiple of 9, Algebra
- Number Bracelets: Place Value, Addition, Modular Arithmetic, Combinations
- Collatz Tree: Equations and Expressions, Recursive Formulas, Divisibility Rules, Exponents, Prime Factorization

Key Take Aways

- Kids deserve time to play mathematically
- Celebrate the process, not perfection
- Exploration can overlap with skills practice
